

TB-0370**LOAD LIBRARY NAME CHANGE
FOR ADABAS USERS**

Issue Date: October 20, 2005
Effective Date: January 22, 2006
Transition Period: October 23, 2005 to January 22, 2006

Effective January 22, 2006, ITS Database Administration will change the LOADLIB data set names for all ADABAS batch user environments to a general users naming standard. Each ADABAS environment is listed with the associated LOADLIB data set name change. The name change will be made to the corresponding ITS-provided batch user procs.

For application users who do not use the standard procs, it is recommended that those users modify their batch JCL to point to the new DSN prior to the effective date. A mass name change can be completed with any partitioned data set. Contact the DBA group if assistance is needed. During the transition period, both the old and new LOADLIB data sets will be accessible until the effective date.
